

Temporal dynamics of the Lucky Strike hydrothermal vent field – the EMSO Azores observatory

EMSO Azores Deep sea Observatory

Understand the links between geological, physical and chemical processes and their effects on the dynamics of the hydrothermal fauna at different spatial and temporal scales at the Lucky Strike vent field

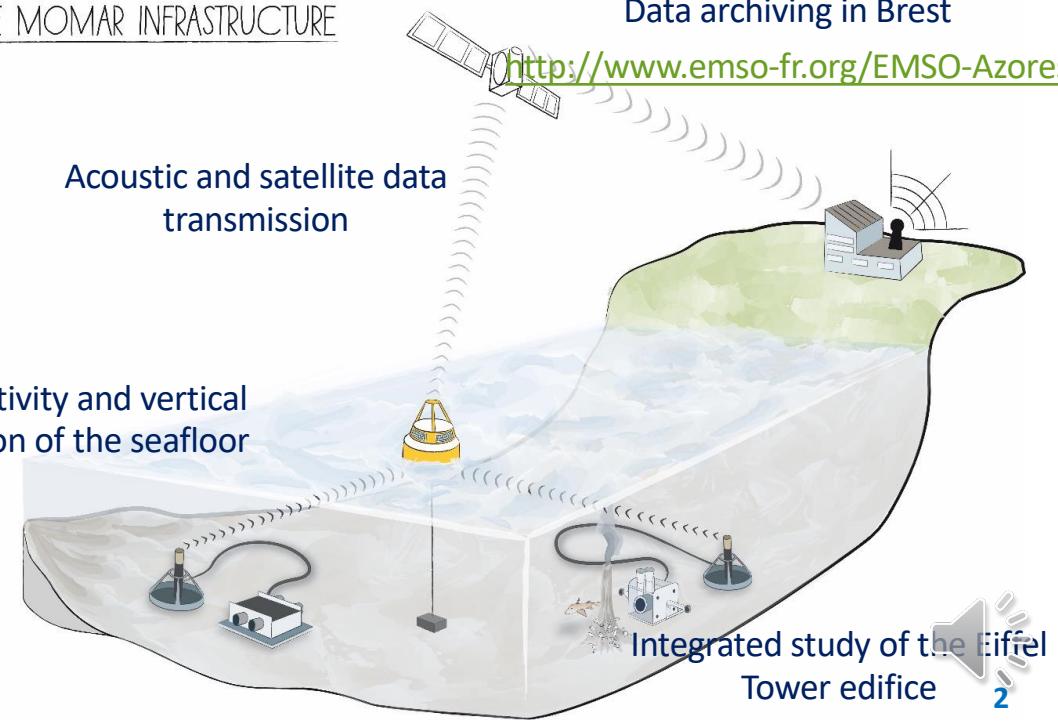

THE MOMAR INFRASTRUCTURE

Acoustic and satellite data transmission

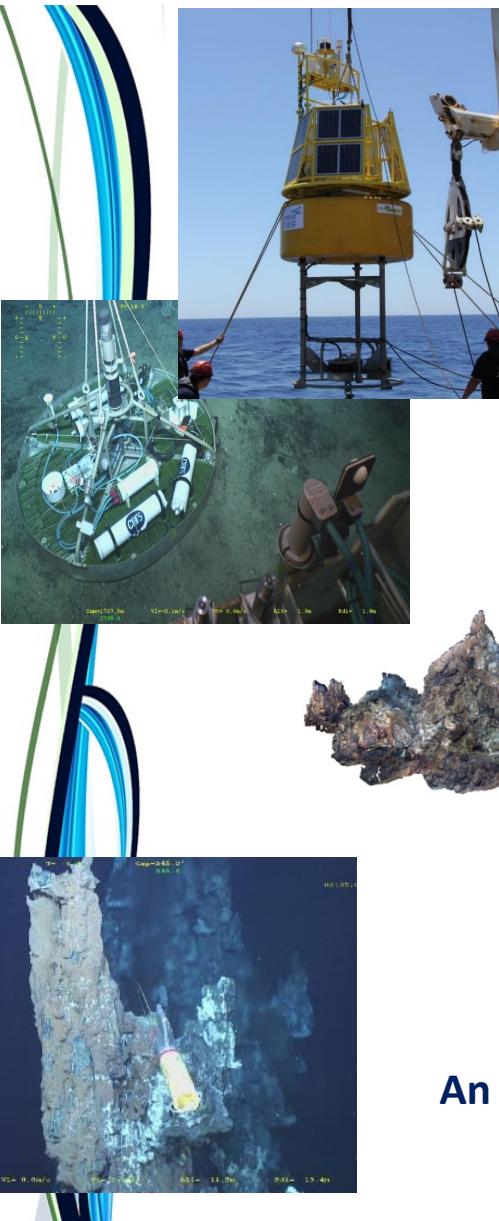

Seismic activity and vertical deformation of the seafloor

Data archiving in Brest

<http://www.emso-fr.org/EMSO-Azores>

Integrated study of the Eiffel Tower edifice

The BOREL buoy : Acoustic and satellite communication, Weather station, Automatic Identification System, COSTOF 2 and WIFI20 solar panels

The West Node : 1 connected OBS, 2 pressure gauges, GPS on the buoy,

- TEMPO HD camera, CHEMINI and O₂ optode
- CISICS : instrumented microbial colonisation device
- Turbidity sensor and O₂ optode
- BARS chlorinity sensor
- Thermistor string
- Hydroctopus hydrophone array
- Fluid sampler DEAFS
- EGIM- EMSO Generic Instrumentation Module

The East Node

- Autonomous OBS array
- Autonomous pressure gauge
- Temperature probe arrays
- Physical oceanography mooring and modelisation
- Colonization substrata (ecology/microbiology)
- Autonomous currentmeters
- Sampling strategy

EMSO-Azores ▾

EMSO-Azores

EMSO-Azores is a non cabled multidisciplinary observatory devoted to the long term integrated study of mid-ocean ridge processes, from the subsea floor to the water column.

EMSO-Azores was deployed in 2010.

EMSO-Azores seafloor observatory is supported by France and Portugal as their contributions to EMSO. The site is open to new collaborations, connected instruments for near real time data transmission or autonomous sensors.

Scientific objectives

Infrastructure (2017-2018)

Real time data plot

Data download

Maintenance cruises

Ground breaking results

A Technological development platform for environmental monitoring

- 10 years of operations
- Near real time data
- From the sensor to the Data management centre
- <http://www.emso-fr.org/EMSO-Azores>

- Transfer of the Costof to RTSYS
- Trial of the EGIM in 2017
- DEAFS with TOPINDUSTRIE
- Camera SMOVE, antifouling system / Forsea

- Servicing procedure
 - Deployment / recovery with cables
 - 2 submersibles
 - 3 different vessels
 - Decrease the impact
 - Optimize the servicing process

Hydrothermal circulation at Lucky Strike

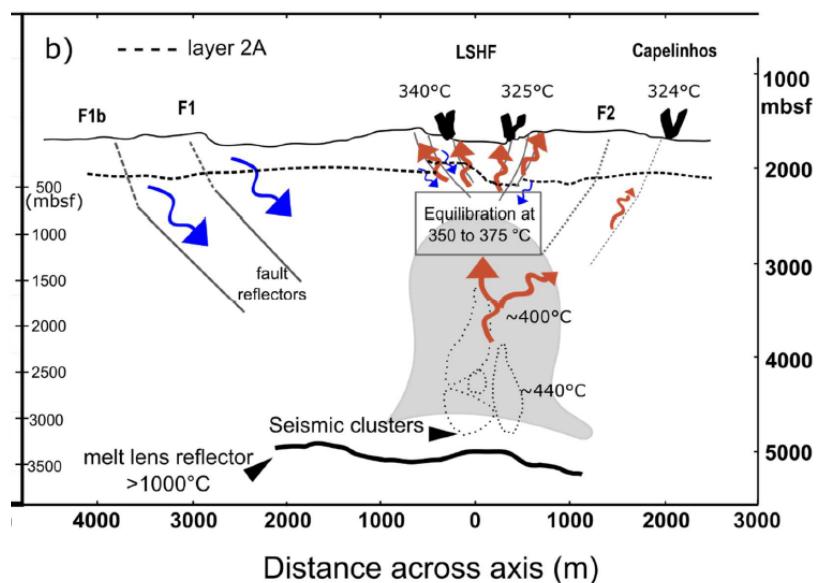

Hydrothermal circulation is constrained by

- Fault reflectors
- Substrate permeability

Fluid chemistry is controlled by

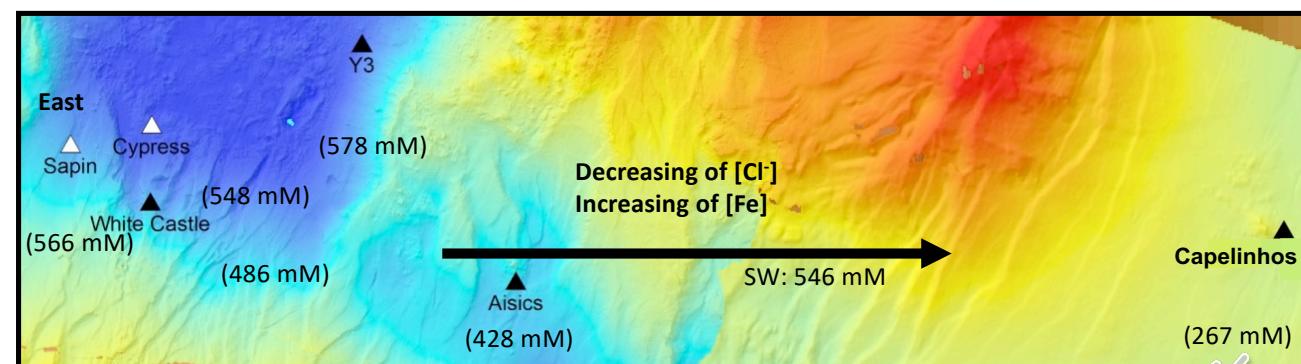

- Fluid circulation (down and upward)
- Depth of the reaction zone
- Phase separation

Conceptual model to explain the spatial variability of the fluid chemistry at Lucky Strike

Disparities among sites for end-members

Leleu (2017): East-west chlorinity and Fe gradient in the end-members

Leleu et al 2017, Crawford et al. 2013, Fontaine et al. 2014,

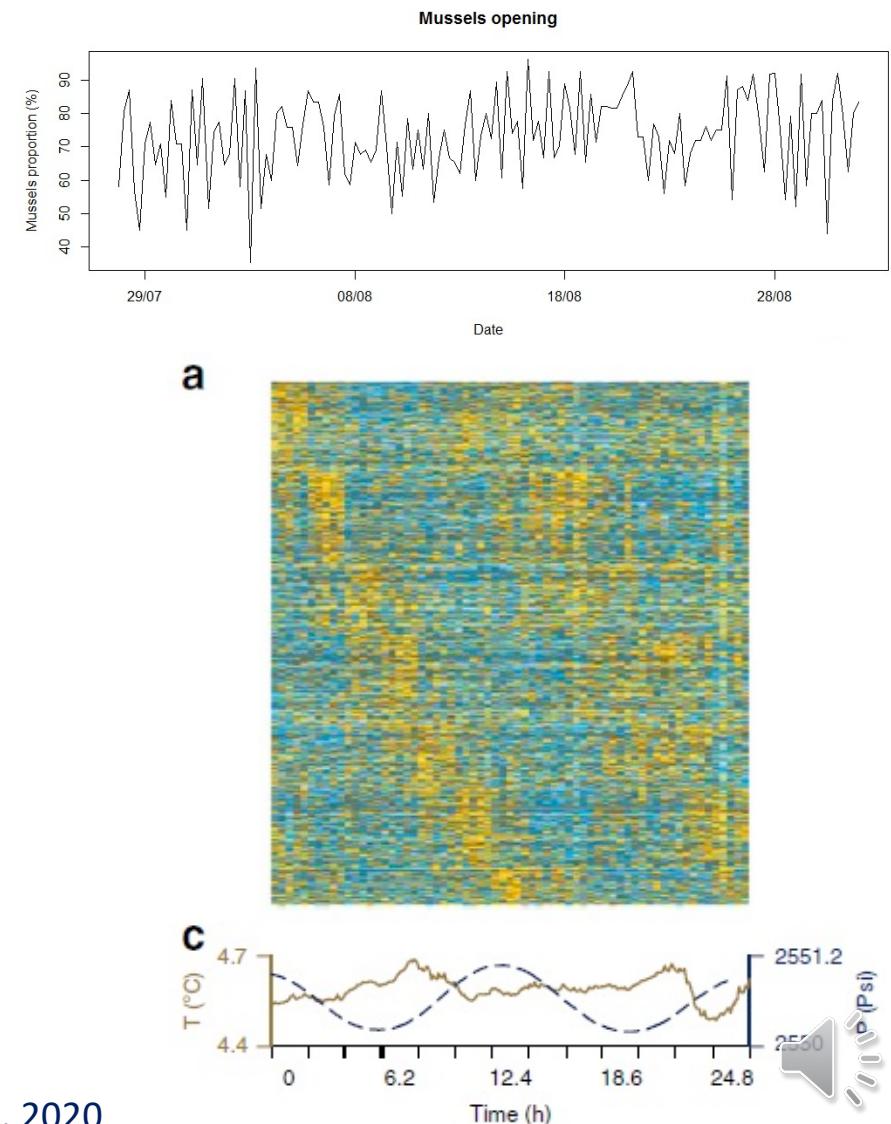

Mussels have rhythm in the shells

Long term observation
New specific sampling strategy

Presence of biological rhythms on a deep-sea species,
both in terms of

- behavior (mussel openings)
- molecular sequencing (transcriptome)

Mat et al. 2020

Public Outreach – Ocean Literacy

Discover, understand to better protect!

Abyss box – A permanent exhibition at Oceanopolis – Brest

Shrimps and crabs from Lucky Strike in a pressurized aquarium.

2012 ...

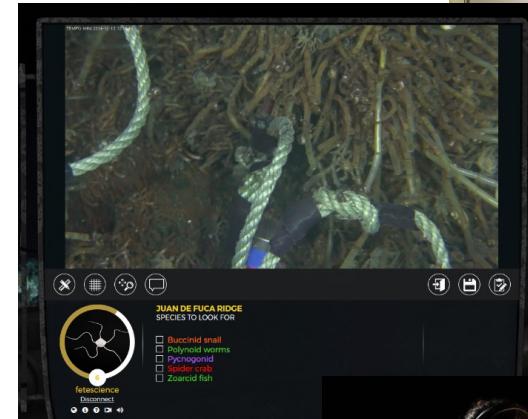

Deep sea spy – A collaborative annotation tool

Citizen science initiative

On line image annotation tool (EMSO-Azores and ONC)

Dedicated scientific website

Donvor, Deep thoughts

Scientific and artistic immersion into the deep-sea

« Radiophonic theater play » > 20 000 spectators

Permanent exhibition « Under the ocean »

Paris , Palais des Sciences et de la découverte, M. Cannat

EMSO-Azores – a platform to the deep-sea

From deep-sea observatory to Environmental monitoring and ecosystem management

10 years of successful deployment

- A technological development platform
- From Ecosystem functioning to Marine mineral resources potential impacts
- Leverage effect (MIDAS, FIXO3, ENVRI+, MERCES, PIONEER, Marine Mineral Resources, IAtlantic...)
- Ocean Literacy

Added value of the combined approach
site study / observatory maintenance

New period of 5 years 2021-2024

- Enlarging the scientific community
- Increasing the servicing periodicity
- New clean mooring methods
- Underwater noise
- Data visualisation
- Image analysis, ...

New inputs :

- Ecosystem preservation and resilience
- Efficiency of a marine protected area
- Access to new samples / questions
 - Climate change, pollutants, active molecules ...
