

MELOA Catalogue and Geoportal: A modern approach for open access and visualization of in-situ drifter data

EuroGOOS
European Global Ocean
Observing System

EuroGOOS 2021

Félix Pedrera

May 3 - May 5, 2021

9th EuroGOOS International conference - Virtual Edition

This project has received funding from the European Union's Horizon 2020 Research and Innovation Programme under grant agreement no 776280

Overview

- MELOA: Proposed objectives and focus
- The WAVY Family
- MELOA Software Ecosystem
- MELOA Catalogue
- MELOA Geoportal
- MELOA OGC Data Services
- Conclusions and next steps

<http://ec-meloa.eu>

MELOA | Project Focus

Low-cost

Easy-to-handle

Wave Resilient

Multi-sensor

Extra-light

For use in all water environments: deep-sea, inland waters, coastal areas, river plumes and surf zones.

Key Features are:

- Small sized, making the WAVY very easy-to-handle
- Optimized buoyancy, reducing the WAVY vulnerability to direct wind effect
- Minimized pendular motion, facilitating the WAVY position detection

<http://ec-meloa.eu>

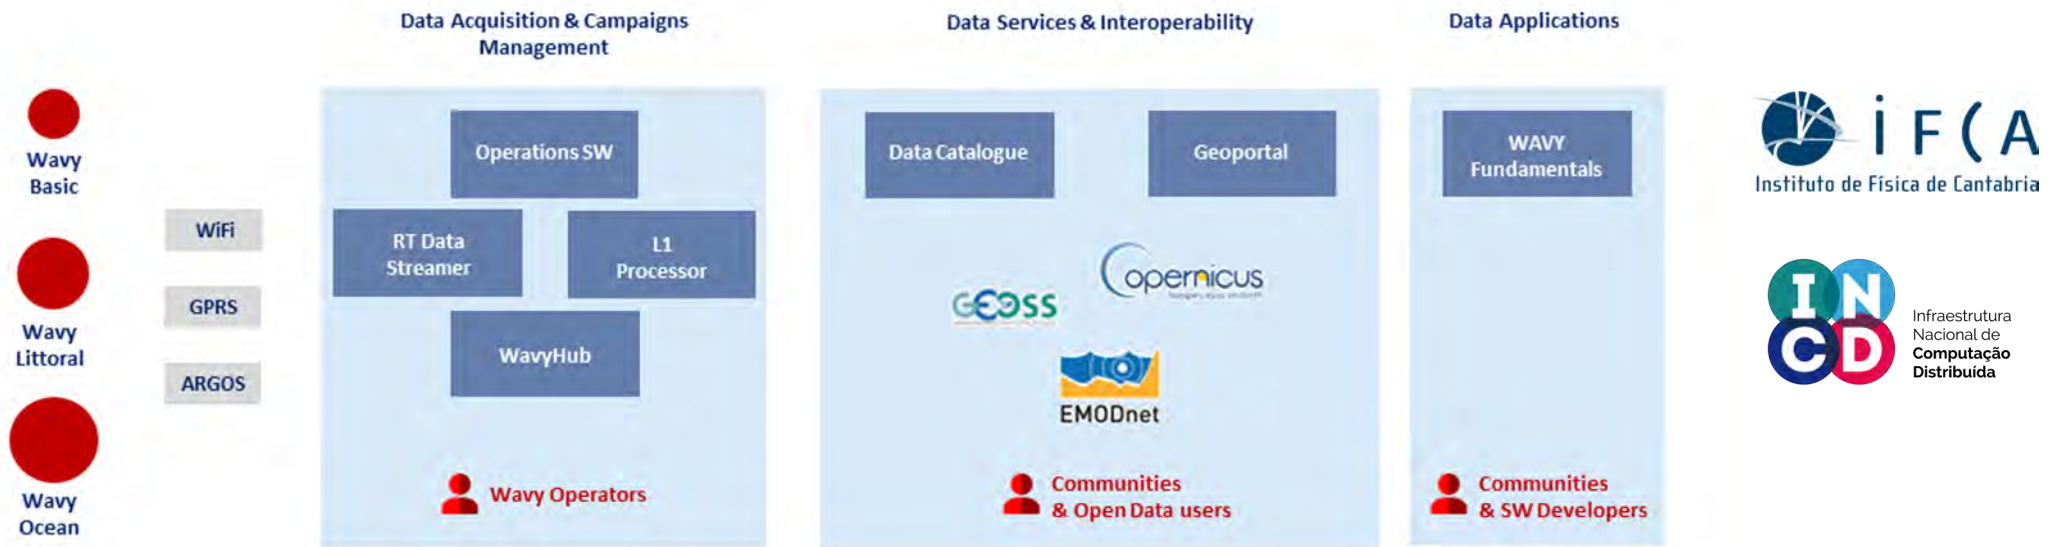

MELOA | WAVY Family

WAVY Version	Main features
WAVY Littoral	GNSS, GPRS, IMU (MEMS)
WAVY Ocean	GNSS, adjustable ballast module, 2 thermistors (near sea-surface temperatures), satellite communications, IMU, solar panels
WAVY Ocean-plus	GNSS, adjustable ballast module, 2 thermistors (near surface sea-temperatures), satellite communications, IMU, solar panels and wave energy harvesting
WAVY Ocean-Atmo	Equatorial floating (wind exposure), GNSS, adjustable ballast module, 4 thermistors (near surface sea- and air-temperatures), atmospheric pressure, satellite communications, IMU, solar panels and wave energy harvesting
WAVY Basic	GNSS, GPRS, 1 thermistor

More details: Breakout Session 6 - Part I: Ocean Observing Technologies at 10:20 - 11:25 h
 “The WAVY drifters and their role in Ocean Observation” by Rogério Chumbinho (BlueWise Marine)

MELOA | SW Ecosystem

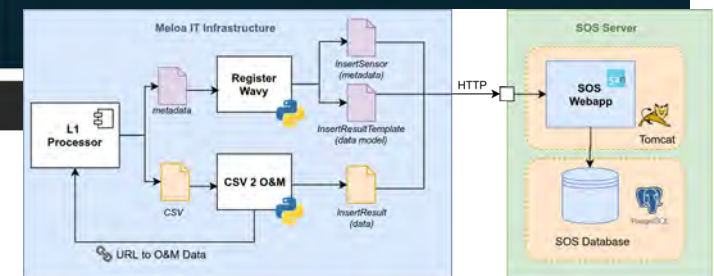

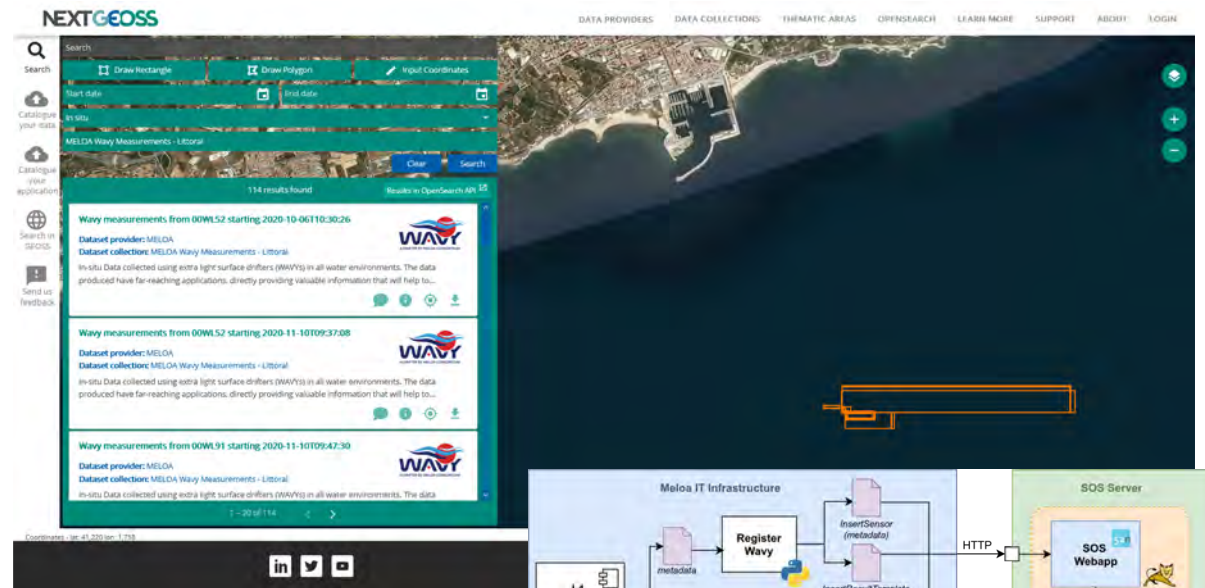

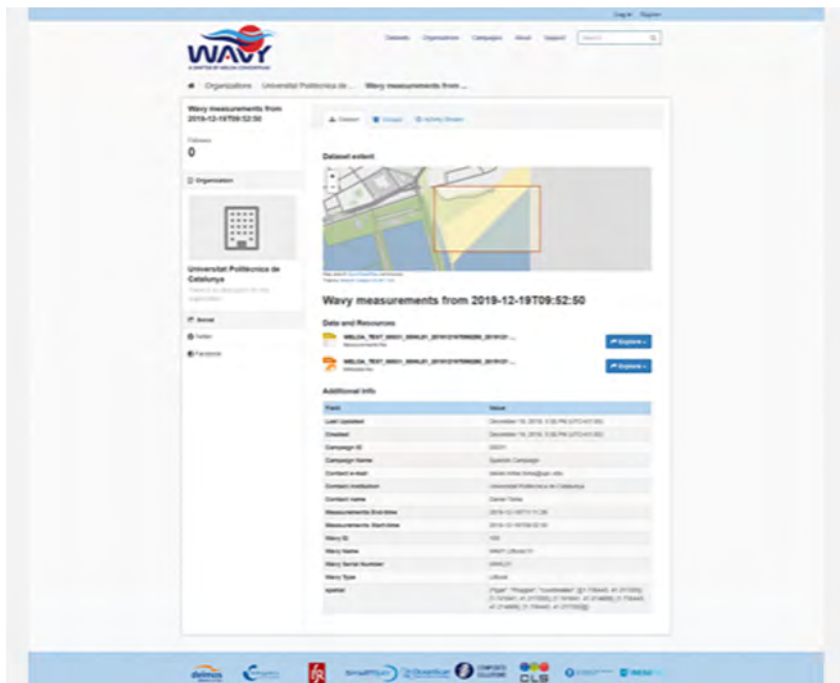

Infrastructure support from the Advanced Computing and e-Science group at the Institute of Physics of Cantabria (IFCA CSIC-UC) from Spain and the National Distributed Computing Infrastructure from Portugal (INCD)

<http://ec-meloa.eu>

MELOA | Catalogue (<http://catalogue.ec-meloa.eu>)

<http://ec-meloa.eu>

MELOA | Geoportals

(<https://geoportals.ec-meloa.eu>)

The screenshot shows the MELOA Geoportals web application. On the left, there is a sidebar with a list of WAVY campaigns, each with a search icon and options for 'Points', 'Trajectory', 'Display trajectory limits', and 'Export'. The main area displays a map with a trajectory of data points. A detailed view of a WAVY campaign is shown, including a 'WAVY DESCRIPTION' table and a 'MEASUREMENT' table.

MEASUREMENT	VALUE
Speed	0.30 m/s
Height	-0.81 m
Course	226.32

MELOA | OGC Data Services

Web Map Services (WMS)

- Suitable for view services and integration with GIS applications and other geoportals
- Limited in terms of interactivity (Vector Tiles is better).

Web Feature Services (WFS)

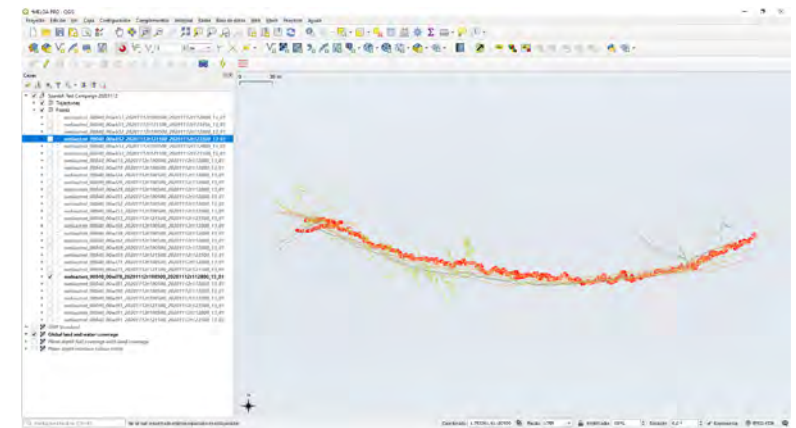

- Suitable for download services in different GIS formats (GeoJSON, GML, etc).
- Limited in terms of time-series analysis and performance.

Sensor Observation Services (SOS)

- Focused on management of sensor data and metadata and time series analysis.
- O&M data model in JSON format
- Semantically robust SensorML description of the sensors.
- Limited on performance due to the high volume of observations per dataset of MELOA

SensorThings Service

- Focused on easy-to-use REST style to manage data.
- Data model less restrictive.
- Compliant with the O&M data model.
- Better performance for the MELOA use cases and characteristics.

MELOA | Conclusions and next steps

Conclusions

- The MELOA Catalogue and Geoportal are a **modern approach for data sharing and visualization** of marine in-situ drifter data for different audiences and communities
- **Catalogue** based on CKAN **for easy search and federation** with other data catalogues such as NextGEOSS.
- **Geoportal** based on Vector Tiles technologies to enhance **user experience and data visualization and interaction capabilities**
- **Data Services** in different formats: **WMS/WFS** for GIS integration and **SOS/SensorThings** focused on the oceanography domain and semantic interoperability.

Next steps and future work

- **Sensor calibration, Quality Checks** and **flagging** to ensure quality of data.
- Provide data to **CMEMS** and **EMODNet** through the Catalogue interfaces.
- Improvement and full publication of the OGC Data Services and documentation.
- Data visualization of relevant scientific variables (**Wave parameters, Sea Surface Temperature, Pressure**) and value added data products.
